

Alpha-Tape® Metallica Edge Banding

By laminating real metal foil onto an ABS (Acrylonitrile butadiene styrene) surface, MKT has elevated the ordinary into the extraordinary. Alpha-Tape® Metallica is a thermoplastic edge band with the look and feel of real metal, without the processing challenges of a true metal edge band. Metal brings a warmth and texture to almost any environment while offering a stunning visual contrast to other surface materials, like wood, textured TFL, matt, and high gloss finishes. Whether its smooth aluminum, or brushed stainless steel, these silvery metal finishes add high sparkle, shine, and perceived value, complementing a multitude of interior residential and commercial products.

SSI's Alpha-Tape® Metallica Stocking Program features the top three finishes in the market -

Smooth Aluminum - Brushed Aluminum - Brushed Stainless Steel

Other metal finishes available upon special order.
